High-Puff Disposable Capacity in Australia

2026 spec snapshot. PDF edition 10 November 2026.

Adults 18+ only. This is a desktop reading of publicly listed specifications. It is not a laboratory assay of aerosol or nicotine delivery, and it is not medical or legal advice. It is not a TGA determination of lawful supply.

Catalogue prices in this PDF
Listed on this shop from 8 November 2026. Confirm the product page before citing a checkout total.

1. Reference device: Alibarbar Ingot 9000

Core listed specifications used as the research baseline on this catalogue.

Puff rating
Up to 9000 puffs. Usage dependent. Not a guaranteed count of 9000.

E-liquid
22 ml, pre-filled.

Battery
2350 mAh, sealed, non-rechargeable. No charge port.

Coil and activation
Mesh coil. Inhale-activated. No buttons.

Display
LED for battery still left and e-liquid still left.

Nicotine
Not one number for the whole site. The mg/mL or percentage printed on that pack is the figure to trust.

Catalogue boundary
This shop lists the Ingot 9000 only. It does not list an Ingot 20000. A higher puff name with a charge port is a different device.

2. Ranges, not one SKU per brand

Competitor figures in the 20 August 2026 desk pass are ranges. They are not a single model that stands for IGET, HQD, Gunnpod, KUZ, RELX or Geek Bar.

Headline puff band
About 1,900 to 9,000 for sealed units commonly listed. Some rechargeable names advertise 10,000 or more. Those are a different class of device.

Tank
The Ingot 9000 lists 22 ml. Many familiar compact models in the same pass sit around 2 to 12 ml.

Dual LED
A display for both battery and e-liquid was still uncommon among the competitor models tracked. A missing LED on a unit sold as an Ingot 9000 is an authenticity warning on this catalogue, not a spec variant sold here.

When the priority is the highest listed sealed capacity plus a remaining-life display, the Ingot 9000 was the stronger match in that snapshot. When the priority is a flavour from another brand, or a rechargeable high-puff stick, capacity on its own should not decide the buy.

3. How to read the Ingot 9000 LED

The LED is two readings, not one. Exact flash patterns belong to the device in hand. This PDF does not publish a blink code.

- E-liquid empty: the device is finished, even if the battery indicator still shows charge.
- Battery empty and vapour falling away: finished. Replace the sealed device. Do not charge it.
- A flash with little or no vapour, a burnt taste, or vapour that thins suddenly: usual end-of-life signs.
- Do not open the case, puncture it, or jury-rig a charger. This model has no charge port.

4. Disposal checklist for a sealed device in Australia

A finished or damaged disposable still holds a lithium cell. General information, not a substitute for the collection point's own rules.

- Do not put it in household rubbish or the kerbside recycling bin.
- Hand it in whole at an e-waste or battery drop-off. Ask the local council which site accepts it.
- Do not open the device to remove the battery.
- Keep finished units in a small container, cool, and away from loose metal, children and pets, until drop-off.
- Swelling, unusual heat, a burning or chemical smell, leaking liquid, hissing or smoke: stop using it.
- If it is hot and safe to move, set it on concrete, tile or a metal tray away from anything that can burn. Do not cool it in water.
- If it is smoking or on fire, keep clear and call 000.
- Liquid on skin: wash with soap and water. If someone may have swallowed liquid, call the Poisons Information Centre on 13 11 26.
- Tell drop-off staff when a unit is swollen, leaking or damaged.
- Airlines generally require lithium devices in cabin baggage, not checked bags. Check that airline before flying.
- Store spares cool and dry, not in a hot car, not in direct sun, and not loose with keys or coins.

5. This shop's catalogue context

Merchandise prices in Australian dollars, listed from 14 November 2026. Regular Post is extra, except an order of 20 or more devices. Prices can change.

Ingot 9000 single
A$42

Ingot 9000 3-pack
A$119

Ingot 9000 5-pack
A$179

Ingot 9000 10-pack
A$329

Ingot 9000 20-pack
A$599, and Regular Post on that order is free

Regular Post
A$10 for under 10 devices, A$15 for 10 to 19, free from 20.

Delivery
Usually about 3 to 7 business days after payment is confirmed. Australia Post Regular Post.

6. Limitations

- Not a lab assay of aerosol output or nicotine delivery.
- Competitor specifications change by model and region. Ranges are illustrative.

- Reddit and YouTube were qualitative context only in the underlying note.
- Catalogue prices and shipping are site-stated and may change.
- Adults 18+ only.
